

Start any app from the Office 365 App Launcher

Make all your applications available to users in their familiar working environment.

Integrate native applications from any data center into Office 365

- ✓ Securely unite complete desktops or single remote apps from different data centres and publish them in your Office 365 account
- ✓ Better user experience - only one login necessary
- ✓ Use Azure AD as Single Sign-On Identity Provider for all your applications
- ✓ No more VPN clients required for users
- ✓ Web-based and high-performance remote access, without plugins

With oneclick™, you can directly provide native applications, such as Sage, SAP or AS400, from your own data centre in the Office 365 App Launcher for users. By clicking on the desired tile, oneclick™ automatically opens a remote session and logs the user on via Azure AD. Users do not have to know their credentials for the respective application. In addition, particularly sensitive applications can be secured by a second factor while opening. oneclick™ delivers a seamless user experience for the combined work with Office 365 and native applications.

Login to Office 365 with Single Sign-On

User starts Application from App Launcher

oneclick™ checks User Identity and launches App

Use (native) App in the browser

Do you have questions?

We would be delighted to provide you with consultation regarding your individual circumstances. Please do not hesitate to contact us via phone or email. We are looking forward to hearing from you!
